We had Polston Applied Technologies come out to our facility on February 22, 2013 to demo their suction truck. They vacuumed out influent wet well that had about 4 feet of grit. It took about 3 hours to completely clean all the grit out of our wet well. I am very impressed with their combination truck I would say they removed about 90% of the grit without taking my plant out of service. I would recommend Polston to anyone that needs grit removed and cannot take their plant off line.

Sincerely: Kyle Jerrels

Superintendent of Water & Wastewater.
