A Message After the Storm

To our friends in Florida and Texas, we hope your families, friends and anyone else who may have been affected by hurricane Irma or Harvey remain safe and sound. While hurricane season is in full swing, November 30, the end of the season, is thankfully drawing near.

On a personal note, as a fellow Floridian living in Sarasota, Florida, Hurricane Irma hit very close to home. It was difficult to see the toll the storm took on the community and surrounding areas, and am I glad to see recovery efforts underway.

In the meantime, there are resources online to help prepare for future storms, including the U.S. Department of Homeland Security's guides on what to do before, during and after a [hurricane](#) or [flooding](#).

Here's to the remainder of this year's season being inactive, and we

send heartfelt thoughts and well wishes to those who were impacted by the storms.

Storm Season Is In Full Swing Are You Prepared?

500,000 gallons of untreated water flows into streets and homes; maintaining lift stations before, during and after a hurricane. These are just a few of the impacts a hurricane and flooding can have on a community.

How can wastewater treatment facilities prepare for major weather events to handle increases in flow? We've got answers.

USST disposing of nearly 150 tons of sand and grit from Bethune Point WRF.

2,000+ Tons On Its Way Out

That's nearly the weight of 1,000 Ford F-150s!

We're hard at work restoring the capacity of this 13 MGD water reclamation facility by removing primarily sand and grit, estimated to be at more than 2,000 tons upon completion of the project. Take a look at what we've been up to in Daytona Beach.
